

I AM ACTIFY INSIGHT

Dynamic Dashboards & Visual Analysis

Connected Manufacturing

Once you have access to enterprise data, visual analysis and reporting is the next logical step to effectively manage the magnitude of connected enterprise product data.

Actify Insight is the culmination of Actify's combined technologies and methodologies to address a client specific business need. Far more than just Business Intelligence reports, your data is no longer static knowledge, but a source of insight coming from across the enterprise. Actify Insight delivers a dynamic and active interface for complex visual analysis and reporting.

Today's business intelligence solutions do not understand product data—a necessity for any discrete manufacturer. Discrete manufacturers data is unique, because your information assets include 3D models and 2D drawings with information hidden within CAD files (dimensions, eBOM, PMI, GD&T, etc.)

With Actify Insight, companies are able to take any disparate data and show relationships, patterns and history impacting the product results from concept throughout its lifecycle to maximize returns. Actify's method of visual insight is to present the data in a dynamic or active way, such that by asking to simply re-order the data, you can gain new or deeper insight.

Data Mining and Predictive Analytics

Once you have not only the data, but also the relationship between your information that is continuously updated—you have an agile, adaptive and ease-of-use tool for drilling down on harnessed knowledge.

You gain the ability to find all levels of “where used” or “what if” scenarios. Plus by reviewing the current status and comparing to historical facts, the system automatically generates predictions of future events. Combining of model data with meta-data and their relationships among many factors allow assessment of risk associated with particular conditions guiding informed decisions.

Our Actify Insight technology uses proprietary product data analysis technologies combined with innovative data discovery components to deliver an agile, adaptive, innovative approach to providing insight from the engineering and/or manufacturing operations.

Visual Reports

Actify can give you visual insight in order to make informed decisions.

Here are some dynamic visual report examples:

- Profit analysis
- Model color-washed based on variables
- Product Structure Analysis
- Product Process / Forecast
- Design Review Analysis
- Duplicate Recognition
- Common Occurrence
- Part Associative Analysis
- Logged Time Analysis
- BOM Management
- End Item Management
- Dynamic Program Reports
- Production Project Comparison
- Resource and Capacity Management
- And more...

As business leaders, you have the ability to reduce risk, lower costs, and improve efficiencies by empowering your information workers. The result, your organization will gain business insight, agility and bring products to market faster to achieve corporate success.

Actify Insight is the dynamic solution for harnessing that intelligence from multiple sources. Actify can develop a custom interface to display a specific view of your enterprise data. Mash data together from multiple sources, include the perspective of historic or legacy data to deliver rich business insights to help your organization achieve their strategic objectives.

Why Actify Insight?

By leveraging Actify's core technologies as a tool box we can deliver the platform, the graph database architecture for handling disparate unstructured data and deliver an interface or dashboard to overcome your critical business challenge.

About Actify:

Actify, Inc. is 100% focussed on delivering solutions that revolutionises the way product data and product information is managed and shared across the enterprise and throughout the development life cycle.

Actify understands product data, from the original designer's product definition within engineering to disparate product data across a manufacturer's extended enterprise.

Actify have been providing product visualization software to the discrete manufacturing industry for more than 15 years overcoming the challenge of sharing and communicating engineering type documents across the extended enterprise or supply chain. Today, Actify provides a unified platform that significantly speeds up enterprise data access everywhere and overcome the challenge of sharing engineering type data.
